

MLC Air-Cooled Chillers
MLC-FC Free-Cooling Chillers
MLC-AD Adiabatic Chillers

60 - 500 Tons

When commercial grade isn't enough

Businesses functioning in today's advanced industrial manufacturing and mission critical environments depend on chiller systems to provide a reliable source of chilled water, which can improve overall system uptime and efficiencies.

Every critical cooling application is unique, which is why the Motivair® MLC chillers have been designed to accommodate a wide range of operating points and customization based specifically on the needs of the customer. No other air-cooled chiller offers such a broad range of features and benefits that can be used in combination to create a chiller best suited for your business's needs.

As an industry leader, we aim to deliver innovative products, reliable solutions and an unwavering commitment to excellence.

Application Defined Features & Options

INDUSTRIAL WATER CHILLERS

All MLC chillers feature two heavy-duty, 3500-RPM semi-hermetic screw compressors mounted in two completely independent refrigeration circuits. Each compressor features four steps of unloading for virtually unlimited capacity control. Compressor options:

- Standard Screw Compressor
- Low-Temperature Screw Compressor
- Variable Speed Screw Compressor

CONDENSER FAN OPTIONS

Fans feature heavy-duty, composite blades, which do not flex or lose efficiency at the top of their performance curve. Motors feature reversed stator and rotor, eliminating the traditional motor shaft. Motors are TEAO; suitable for outdoor use, and variable speed operation. Optional EC fan technology available.

EVAPORATORS

The MLC & MLC-FC chillers feature an ASME U stamped, dual circuited evaporator mounted on the chiller base. Carbon steel shell with heavy gauge copper tubes insures long life and highly efficient heat transfer under varying loads. All MLC evaporators feature removable end bonnets and pressure relief valves. Low GWP options: R-1234ZE, R-513A.

ADDITIONAL OPTIONS

- Simplex (1) Pump Package
- Duplex (2) Pump Package
- Storage Tank
- Low Noise or Ultra Low Noise Package
- High Ambient Package
- Stainless Steel Cabinet Construction
- Condenser Coil Coating
- Security Guards for Open Areas
- **Integrated Free-Cooling System**
- **Adiabatic System**

WHEN DOWNTIME IS NOT AN OPTION

Integrated Free-Cooling: The Ultimate Solution for Optimal Energy Savings

The Motivair® MLC-FC chillers with “Free-Cooling” capability are designed to provide the owner with optimal performance, year-round, in varying ambient temperatures.

This “Free-Cooling” option, available on models MLC-FC 200 – MLC-FC 1750 is supplied with “Free-Cooling” coil and the PC05 advanced PLC control package – a unique single package for year-round energy savings.

The refrigerant plant is designed to cool the designated heat load during the highest summer temperatures. When ambient temperatures fall overnight or during cooler seasonal weather, the integrated “Free-Cooling” system is automatically activated.

The system operates by directing the return chilled glycol through the “Free-Cooling” coil, before it enters the evaporator. This is achieved via an automatic motorized valve, controlled the PLC, whenever the ambient falls below the return chilled glycol temperature set point.

The glycol is either partially or completely cooled in the “Free Cooling” coil for maximum energy savings. As result, less mechanical refrigeration is required to achieve the chilled glycol set point, and the refrigeration compressors are cycled off by

the PLC, which continuously monitors the system.

Energy savings in areas with cooler winter months are substantial. Wear and tear on chiller components is dramatically reduced, due to fewer running hours during winter months.

Automatic switching between mechanical cooling and “Free Cooling” allows for optimal performance year-round. As a general guideline, “Free-Cooling” savings more than pay for the initial investment in the first year of operation.

THE PIONEER OF **FREE-COOLING CHILLERS** When Maximum Uptime And Lowest TCO Matter Most

- MLC-FC Chiller Range has been designed, built and tested specifically as packaged Free Cooling Chillers
- ETL-Tested and Listed to current UL & CSA standards

Adiabatic “Efficiency Boosting” System

AIR-COOLED CHILLER SYSTEM

The Motivair Adiabatic “Efficiency Boosting” System uses a proprietary evaporative “Pre-Cooling” media designed to pre-cool warm ambient air before it reaches the air-cooled chiller condenser coils.

During warmer seasonal weather, the Adiabatic System automatically activates and allows a small flow of city water to wet the evaporative media. Warm, dry air first passes through the evaporative media where it is pre-cooled before it enters the condenser coils. Water that is not evaporated is collected and recycled. Depending on geographic location, inlet air temperatures can be reduced by up to 20°F yielding significant chiller efficiency gains, increased reliability during extreme summer weather, and reduced building energy demand loads.

The evaporative media is specifically designed for ultra-low pressure drop with virtually no added static to condenser fans. As a factory supplied option, media thickness and air flow velocities are designed to allow zero water carry over onto the chiller coils. The evaporative media is easily removed for field service, cleaning or inexpensive replacement. Virtually maintenance-free and requiring little or no water treatment, the Adiabatic System is ideal for clients seeking simple and reliable efficiency gains for their air-cooled chiller system.

FREE-COOLING CHILLER SYSTEMS

Motivair Free-Cooling chillers can be ordered with the adiabatic option fitted. By automatically turning on the system when Free Cooling is active and the ambient temperature is above freezing, partial and 100% Free-Cooling operating hours can be significantly increased. This allows the refrigeration compressors to be turned off for longer periods of time, in addition to the improved summer air cooled efficiency described above.

The Adiabatic System is controlled and protected by the proprietary Motivair chiller PLC software and is completely automatic including auto fill, winter drain down, low water level and anti-freeze alarms.

PLC Controls

WHEN MAXIMUM UPTIME AND LOWEST TCO MATTER MOST

The MLC range features the PCO5 control system, which is an advanced Programmable Logic Controller, with a base-operating platform that can be easily modified to adapt to various applications.

A multi-character LCD display, and easy to follow directional prompts, gives the operator complete control over all chiller functions. Multiple digital and analog inputs as well as digital and PWM outputs offer unparalleled control possibilities

INTELLIGENT CHILLER RESPONSE

The Latest generation of Motivair® software allows the chillers to respond to system changes in real time and to adjust performance accordingly. The proprietary control logic in the MLC or MLC-FC chillers provides:

- Automatic restart after a power outage
- Rapid restart of refrigeration compressors after a power outage, while affording maximum compressor protection
- Selective decision on which compressor(s) to start first based on run-time and fastest possible response to system load
- Liquid injection to the compressors under high ambient operation
- Seamless transition between refrigeration and optional Free Cooling mode based on system load, chilled water temperature, ambient temperatures and installation profile.

CONTROL FEATURES:

- Highly visible LCD display
- Tactile push-buttons
- Adjustable alarm set points
- °F/°C selectable
- Compressor Lead/Lag control
- Anti-Compressor short cycle
- Compressor failure alarm
- Adjustable water set point
- Supply water temp. display
- Return water temp. display
- Low water temperature alarm
- Freeze alarm
- Low water/glycol flow alarm
- High water temperature alarm
- Low refrigeration pressure alarm
- High refrigeration pressure alarm
- Irregular voltage alarm
- General Alarm Relay
- Remote Start/Stop Relay
- Manual alarm reset
- RS 232/RS 485 communication
- Ethernet Communication
- LON, BACNET, MODBUS communication (optional)

CENTURION MONITORING SYSTEM

This optional feature empowers the owner by providing a wide range of safeties and access to critical data from a remote location via cellular service, outside of the customer's firewall.

If the chiller is operating in an unsafe condition or in the unlikely event of an alarm, designated contacts are immediately notified by the chiller of its condition. The pending alarm can then be avoided or quickly corrected.

FEATURES:

- Data trending
- Password protected multi-level access
- Adjustable warning thresholds

motivair[®]

COOLING SOLUTIONS

MPC & MPC-FC

1/2-50 ton packaged air-cooled or water-cooled chillers for Industrial cooling, Medical cooling or custom HVAC applications. Includes integrated microprocessor, pump station, and storage reservoir.

MLC-SC AIR-COOLED SCROLL CHILLERS

100 – 285 tons air-cooled with scroll compressors to accommodate a wide range of operating points and customization for today's advanced industrial manufacturing and mission critical environments. Available Integrated Free-Cooling.

PTS

Pump/Tank Stations for chillers and cooling systems. Standard and custom designs available.

MFC

Closed loop dry-coolers for process cooling and remote "Free-Cooling" applications.

CHILLED DOOR[®] RACK COOLING SYSTEM

Advanced server rack cooling system fits and standard or OEM computer rack. Removes up to 75 kW of server heat per door.

CDU

The Coolant Distribution Unit (CDU) provides 100% sensible cooling up to 1.25MW, depending on the model. For use with the ChilledDoor[®] or other IT cooling systems.

5900 Genesee St.
Lancaster, NY 14086
